

Employee Management System

End-to-end flow & screen mockups — add, offboard, and rejoin employees

Core idea

Employees are never deleted. When someone leaves, status changes to “Left” and every detail — personal, employment, statutory, documents — stays intact. If they rejoin, HR reactivates the same record instead of recreating it.

01–07 Add employee

A 5-step guided flow capturing personal, employment, statutory/bank, and document details — including Aadhaar & PAN uploads — ending in a review screen before submission.

08 Employee profile

A tabbed, read-only view of everything on record for an employee, with quick actions to edit details or begin offboarding.

09–10 Mark as left

A guided exit flow that captures last working day and reason, then flips status to Left without touching any underlying data.

11 Mark as rejoined

Reactivates a left employee's existing record — optionally updating role, department, or ID — instead of creating a duplicate from scratch.

Marked as Left

18 Dec 2025 · Reason: Resignation · Updated by Priya Sharma

●

Promoted to Payroll Executive

01 Apr 2024 · Previously Payroll Associate

●

Joined as Payroll Associate

18 Jan 2022 · Finance & HR department

PROFILE

10

Employee profile — left

Status badge switches to Left with the date shown. A banner explains the record is read-only. A History tab/timeline shows the employee's full tenure including the most recent exit.

Mockup for review — not final visual design. Built for adaptation into Angular components.

REJOIN

11

Mark as rejoined

Reactivates a left employee. HR confirms new joining date, can keep the same employee ID or issue a new one, and update department/designation if it changed. Old data is retained, not re-entered.
